

Assignment 1 – Explore n8n Case Studies

Go through the n8n case studies and understand how real enterprise organizations are using n8n.

Focus on:

- What problem/use case they had
- Where and why they implemented n8n
- How the workflow was implemented
- How n8n helped them in real-world scenarios

n8n – node based workflow automation platform. it does repeated work automatically and it is like a digital helper.

Common uses:

n8n commonly used for data synchronization, AI automation and App integration

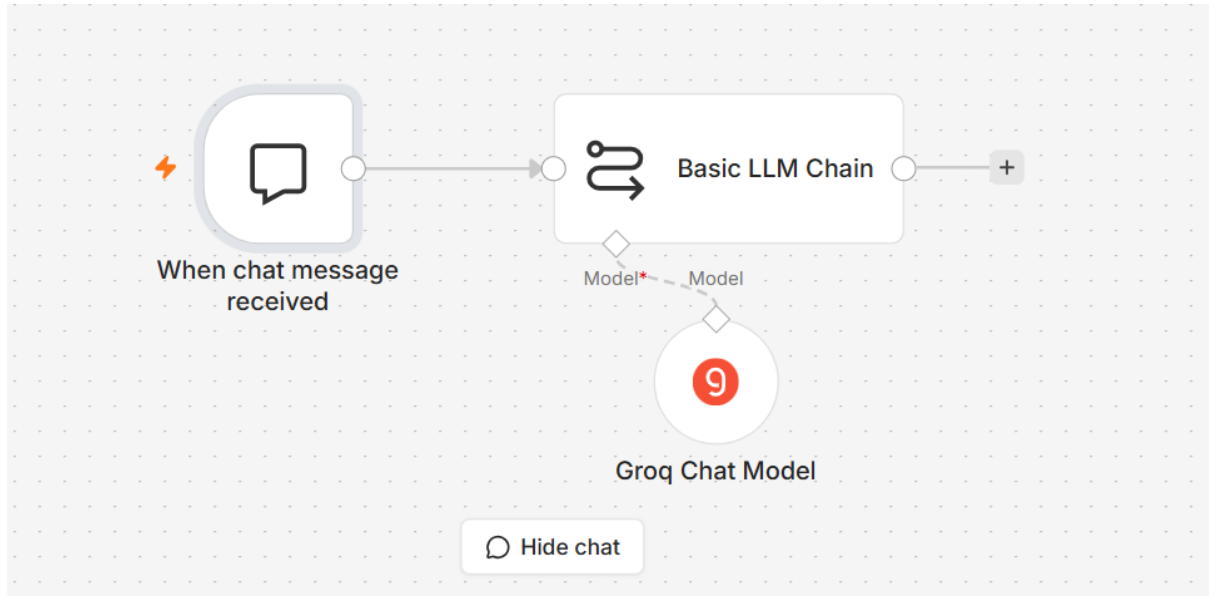

Few company case studies are below:

Company	Problem / Use Case	How n8n Was Used	Real-World Result
Vodafone	Cybersecurity teams had to handle increasing threat intelligence, monitoring and security operations without continually increasing resources.	Used n8n as a security orchestration and automation layer , integrating security tools and creating reusable workflow modules for threat-intelligence operations.	£2.2M cost avoided and 5,000+ person-days saved .
Huel	Many repetitive business processes and increasing demand for AI automation across departments.	Built AI assistants, Slack workflows, data-processing workflows, internal tools, customer-sentiment workflows and other automations using n8n.	£100K+ software cost savings and approximately 1,000 hours of manual work saved in 9 months .
Trendyol	A large technology organization needed technical and non-technical teams to automate small operational tasks without waiting for engineering roadmaps.	Deployed n8n internally and allowed teams to build workflows for seller support, legal operations, search quality and other repetitive activities.	1,000+ active users , 700 active production workflows and approximately 500,000 executions in three months .
TUP GmbH & Co. KG	HR processes such as sick-leave notifications, remote-work approvals and internal knowledge searches required emails, calendar checks and manual follow-ups.	Used n8n with AI to interpret requests, check rules/calendars, automate administrative actions and provide an internal knowledge chatbot connected to company information.	26 hours saved/month with a reported >99% success rate ; 1,282 executions with 12 failures over the reported 30-day period.

Koralplay	Payment-support cases required agents to manually investigate transactions, authenticate into systems, check regulatory status and respond to customers.	Built an end-to-end n8n workflow covering authentication, transaction enrichment, regulatory checks, ticket updates and customer notifications.	70% of payment-support tickets automated and 616 hours saved/week
-----------	--	---	--

Business problem	n8n approach	Typical benefit
Repetitive manual work	Workflow automation	Hours/FTE saved
Multiple disconnected applications	API/system integration	Less manual data entry
AI experimentation	AI + workflow orchestration	Faster AI adoption
Customer support	Automated investigation + response	Faster resolution
